

STATE OF NEW YORK  
PUBLIC SERVICE COMMISSION

Proceeding on Motion of the Commission as to the  
Rates, Charges, Rules and Regulations of  
Consolidated Edison Company of New York, Inc.

Case 06-G-1332

DIRECT TESTIMONY AND EXHIBIT OF  
HELMUTH W. SCHULTZ, III  
and  
DONNA DeRONNE, CPA  
ON BEHALF OF THE  
NYS CONSUMER PROTECTION BOARD

Dated: March 16, 2007  
Albany, New York

MINDY BOCKSTEIN, CHAIRPERSON AND EXECUTIVE DIRECTOR  
NYS CONSUMER PROTECTION BOARD  
5 EMPIRE STATE PLAZA  
SUITE 2101  
ALBANY, NEW YORK 12223-1556

1 INTRODUCTION

2 Q. What are your names, occupations and business address?

3 A. My name is Helmuth W. Schultz, III, I am a Certified Public Accountant  
4 licensed in the State of Michigan and a senior regulatory analyst in the  
5 firm Larkin & Associates, PLLC, Certified Public Accountants, with offices  
6 at 15728 Farmington Road, Livonia, Michigan 48154.

7 I am Donna DeRonne, a Certified Public Accountant licensed in the  
8 State of Michigan. I am a senior regulatory consultant in the firm Larkin &  
9 Associates, PLLC, whose address was identified above.

10

11 Q. Please describe the firm Larkin & Associates, PLLC.

12 A. Larkin & Associates, PLLC, is a Certified Public Accounting and  
13 Regulatory Consulting Firm. The firm performs independent regulatory  
14 consulting primarily for public service/utility commission staffs and  
15 consumer interest groups (public counsels, public advocates, consumer  
16 counsels, attorneys general, etc.). Larkin & Associates, PLLC has  
17 extensive experience in the utility regulatory field as expert witnesses in  
18 over 600 regulatory proceedings, including numerous electric, water and  
19 wastewater, gas and telephone utility cases.

20

1 Q. Have you previously testified before the New York State Public Service  
2 Commission?

3 A. Ms. DeRonne filed testimony in Case 05-E-1222, regarding New York  
4 State Electric & Gas Corporation, Case No. 06-G-1185 regarding the  
5 Brooklyn Union Gas Company d/b/a KeySpan Energy Delivery New York,  
6 and Case No. 06-G-1186 regarding KeySpan Gas East Corporation d/b/a  
7 KeySpan Energy Delivery Long Island.

8

9 Q. Have you prepared attachments describing your qualifications and  
10 experience?

11 A. Yes. We have included Attachments I and II, which are summaries of our  
12 regulatory experience and qualifications.

13

14 Q. What is the subject of your testimony?

15 A. We are testifying concerning the November 2, 2006, rate filing of  
16 Consolidated Edison Company of New York, Inc. ("Con Ed" or  
17 "Company").

18

19 Q. Do you have any exhibits supporting your testimony?

20 A. Yes. We have three Exhibits. Exhibit\_\_(LA-1), consists of four schedules.  
21 Schedule 1 of Exhibit\_\_(L&A-1) presents the impact on revenue

1 requirement resulting from each of the adjustments we are recommending  
2 in this testimony. In determining the revenue requirement impact, we  
3 utilized the rate of return requested by the Company, and the Company's  
4 proposed revenue conversion factor. This does not, in any way, mean  
5 that we support the rate of return or revenue conversion factors  
6 incorporated in Con Edison's filing. Exhibit\_\_(L&A-2) summarizes our  
7 proposed Maintenance Program Changes. Exhibit\_\_(L&A-3) consists of  
8 two schedules. Schedule 1 consists of a list of the responses to  
9 information requests we reference in this testimony and the corresponding  
10 page numbers. Schedule 2 consists of the actual responses to the listed  
11 information requests.

12

13 Q. On whose behalf are you appearing?

14 A. Larkin & Associates, PLLC was retained by the New York State Consumer  
15 Protection Board ("CPB").

16

17 Q. Would you please discuss each of the adjustments you are  
18 recommending?

19 A. Yes, we will discuss each of the adjustments we are sponsoring below.

1 INSURANCE EXPENSE

2 Q. Are you recommending an adjustment to the Company's requested  
3 insurance expense?

4 A. Yes. The Company's request for \$5.8 million is considered excessive,  
5 includes costs that do not protect the ratepayers and is not fully supported.  
6 The Company was requested to "Provide supporting documentation for  
7 the insurance premiums in total" in CPB2, question 12. The response did  
8 not provide the supporting documentation requested. For insurance costs  
9 other than Directors and Officer Liability Insurance premiums, addressed  
10 below, the filing includes an increase of \$792,000 for which the Company  
11 has provided no supporting documentation.

12

13 Q. Please elaborate on your comment that the supporting documentation was  
14 not provided.

15 A. To an auditor, whether it is the Internal Revenue Service, the Company's  
16 outside auditor or even the internal audit staff, supporting documentation  
17 for the insurance premiums would be the premium notice and/or the policy  
18 identifying the cost and the type of insurance that was being billed for. For  
19 ratemaking purposes, the same requirements should apply. The burden  
20 of proof for costs requested in the filing is the responsibility of the  
21 Company. When supporting documentation is asked for, it should be

1 provided. The Company has failed to meet the burden of proof; therefore,  
2 the requested increase in premiums should be denied.

3

4 Q. Is the adjustment that you are recommending limited to the increase in  
5 premiums over the test year amount?

6 A. No. The cost of insurance in the rate year ended September 30, 2008  
7 includes \$1.263 million for Director and Officer Liability Insurance (DLO)  
8 premiums. The \$1.263 million represents 21.8% of the requested  
9 insurance expense of \$5.8 million. The DLO insurance cost is excessive  
10 and provides no direct benefit to ratepayers. In addition to removing the  
11 unsupported increases in insurance premiums contained in the filing, the  
12 \$1.263 million cost for DLO insurance should be removed.

13

14 Q. Why do you contend that the DLO insurance does not provide any direct  
15 benefit to ratepayers?

16 A. DLO insurance is designed to protect shareholders from inappropriate  
17 and/or imprudent actions taken by directors and officers. In essence,  
18 shareholders are protected from their own decisions by purchasing DLO  
19 insurance. If a claim were to be made against the policies for DLO  
20 insurance, the recipient of the proceeds paid by the insurance company

1 would be shareholders and not ratepayers. Since ratepayers would not  
2 benefit from DLO insurance, they should not fund it.

3 We are also concerned that the amount of premiums paid for DLO  
4 insurance has increased significantly since 2001 and 2002 when  
5 numerous corporate accounting scandals were uncovered. Ratepayers  
6 have no control over who is appointed to the Board of Directors and they  
7 have no control over who becomes an officer of the Company.  
8 Consequently, they should not have to be responsible for any potential  
9 mistakes that shareholders make when they decide who will be on the  
10 Board of Directors. The risk associated with shareholder decisions should  
11 be borne by shareholders and so should the cost of insurance that is  
12 purchased to protect shareholders from their own decisions. The removal  
13 of the DLO insurance premiums from the ratepayers' cost of service is  
14 appropriate.

15

16 Q. What is the total adjustment that you are recommending for insurance  
17 premiums?

18 A. The insurance expense should be reduced by \$2.055 million. The  
19 adjustment removes the \$1.263 million for DLO insurance and \$792,000  
20 for the remaining insurance request that was not supported by  
21 documentation despite such information and support being requested.

1 INJURIES AND DAMAGES

2 Q. What adjustment are you recommending to the Company's Injuries and  
3 Damages expense?

4 A. The Company's request of \$9.108 million should be reduced by \$2.685  
5 million to the correct three-year average amount of \$6.423 million. The  
6 Company's calculation is not as has been represented and it  
7 inappropriately includes an increase for escalation.

8

9 Q. What do you mean that the Company's calculation is not as it is  
10 represented?

11 A. On page 44 of the Accounting Panel's testimony, it states that "in  
12 accordance with prior Commission practice, the rate year level of injuries  
13 and damages is equivalent to the annual average of all claim  
14 disbursements for the three-year period July 2003 through June 2006."  
15 The simple average expense for the Company's gas operations for the  
16 three-year period July 2003 through June 2006 is \$6.430 million, not the  
17 \$8.671 million shown in the response to CPB2, Question Number 11. The  
18 Company provided five years of historical expense data for injuries and  
19 damages for gas operations in their response to Staff2, Question Number  
20 28. For the each of the twelve months ending June 30, 2004 through  
21 2006 the expense was \$7.618 million, \$4.964 million and \$6.707 million,

1           respectively. That three-year period averages to \$6.430 million on an  
2           annual basis. That simple calculation provides evidence that not only is  
3           the Company's representation misleading, but it also shows that the level  
4           of expense fluctuates each year. Considering the annual level of  
5           fluctuation, the arbitrary application of an escalation factor is inappropriate.  
6           There is no evidence to substantiate the application of an escalation rate  
7           to Injuries and Damages Expense.

8

9    Q.    How did the Company come up with the average cost it is requesting?

10   A.   The Company simply applied a 16.2% allocation factor to the total  
11       Company three-year average. According to the Company's work papers,  
12       the allocation factor of 16.2% has been used to allocate common costs  
13       among its electric, gas and steam operations since July 1999. The use of  
14       that dated factor for the Injuries and Damages Expense is not appropriate  
15       and is not the historical split as is suggested in the response to CPB2,  
16       Question Number 11. In fact, by taking the Gas Operations expense for  
17       each of the twelve months ending June 30, 2004 through 2006, as shown  
18       in the response to Staff2, Question Number 28 and comparing it to the  
19       total company expense for Injuries and Damages for the same periods as  
20       shown in the response to CPB2, Question Number 11, the annual  
21       allocations to Gas Operations were 10.7%, 9.9% and 16.0%, respectively.

1           The 16.2% factor utilized by the Company in determining the rate year  
2           expense significantly overstates the actual Injuries and Damages expense  
3           recorded by the Company's gas operations.

4

5   Q.    How did you determine that the average expense should be \$6.423 million  
6           instead of the simple average of \$6.430 million you identified earlier?

7   A.    In our calculation, we multiplied 12%, which is the three-year average of  
8           the Gas Operations allocation as described above, by the three-year  
9           average of total Company claims of \$53.525 million, that was utilized by  
10          the Company as shown in the response to CPB2, Question Number 11.  
11          The result is the \$6.423 million that should be reflected as the rate year  
12          expense.

13

14   INTERFERENCE PROJECTS

15   Q.    Have you taken exception to the Company's requested amount for  
16          Interference Expense?

17   A.    Yes.    The Company's request is overstated by \$762,000.    The  
18          overstatement is due to an inconsistency in the Company's calculation.

19

20   Q.    What is the inconsistency that you found in the Company's calculation?

1 A. The Company used averages of three years in some cases and four years  
2 in other cases to determine the total interference cost, but then applied the  
3 test year percentage to allocate the cost between labor and non-labor. A  
4 97% average Commitment Target was used in determining what the City's  
5 expenditure forecast would be. The Company then used an 11% average  
6 in determining what amount would be Con Edison's gross O&M  
7 Interference forecast and then a 19% average was used to determine the  
8 total Gas O&M Interference forecast for the rate year. The inconsistency  
9 in the calculation on Company Exhibit\_\_(TMG-1) is the Company's  
10 application of the historic test year's labor percentage of 22%, instead of  
11 the historical average labor percentage, to determine the rate years Gas  
12 Interference expenditure forecast of \$16,068,000.

13

14 Q. What is required to correct the inconsistency?

15 A. To be consistent, a historic average of the Gas Interference labor dollars  
16 should be applied to the forecasted total Gas O&M Interference  
17 Expenditures. The three year average calculated from the response to  
18 Staff12, Question Number 222 is 25.7%. By reducing the Company's total  
19 calculated rate year Gas Interference Expenditures of \$20,600,000 by  
20 25.7% instead of the single year rate of 22%, the Company's rate year  
21 Gas Interference Expenditures excluding labor are \$15,306,000 instead of

1           \$16,068,000. That results in a reduction of \$762,000 to Gas Interference  
2           Expenditures shown on Line 27 of Company Exhibit\_\_ (AP-6), Schedule  
3           1, and Page 3 of 5.

4

5    UNCOLLECTIBLES

6    Q.    Are you in agreement with the Company's calculation of the uncollectible  
7           factor of .54%?

8    A.    No. The calculation is based on the total company and is not specific to  
9           the Gas Operations. The Gas Operation's uncollectible rate for each of  
10          the twelve months ending June 30, 2004-2006 was .41%, .35% and .49%,  
11          respectively. For the twelve months ended June 30, 2003, the Gas  
12          Operations' uncollectible rate was .37%. At no time was the rate as high  
13          as the .54% level that the Company utilized in projecting its revenue  
14          requirement.

15

16   Q.    What uncollectible factor are you recommending for the rate year?

17   A.    I am recommending an uncollectible factor of .42% based on a three-year  
18          average of the Gas Operation's uncollectibles. That would reduce the  
19          Company's requested expense of \$8,972,528 by \$2,033,527, to  
20          \$6,939,000, using the Company's requested revenue of \$1,652,143,000.

1 To the extent the revenue requirement is reduced below the Company's  
2 request, an additional adjustment would be required.

3

4 BILL REDESIGN

5 Q. Are you recommending an adjustment to the costs for the redesign of the  
6 customer's bill?

7 A. Yes. The Company's request includes three types of costs identified as  
8 incremental costs associated with the larger bill format being  
9 implemented. The added cost identified on line 29 of Exhibit\_\_ (AP-6),  
10 Schedule 8 is \$93,000. According to the response to Staff13, Question  
11 Number 251, the increase consists of the incremental cost for larger  
12 envelopes, annual system/software maintenance costs and one time  
13 educational material costs for a total of \$511,000. Using the Company's  
14 18% allocation factor, the impact on gas operations is \$92,000.

15 We are concerned that the Company's calculation is inconsistent,  
16 Con Edison has not provided supporting documentation as requested, and  
17 that the request pertains to a one-time cost in the rate year. Also of  
18 concern is the Company's assertion in the response to CPB5, Question  
19 Number 35, that there are no O&M cost reductions or savings associated  
20 with the bill redesign.

1 Q. Would you please explain your concerns?

2 A. Yes. The Company's calculation according to the response to Staff13,  
3 Question Number 251, states that the gas operations allocation is 18%.  
4 The responses to Staff8, Questions 120 and 122, indicate that the  
5 allocation for the same costs is 17%. Although the difference is minor, it is  
6 indicative of the inconsistencies in the Company's filing. In addition,  
7 supporting documentation has not been provided. Staff8, Questions 122  
8 requested that the Company "provide contracts or documentation" for the  
9 system/software maintenance costs. The response provided only a  
10 summary of dollars, not the contracts or documentation that are necessary  
11 to support the Company's request.

12 Another concern is that rates are being set to reflect the ongoing  
13 costs of operations and the inclusion of one-time costs by the Company in  
14 its request overstates the ongoing cost of service requirement. One-time  
15 costs, if determined to be necessary and beneficial, should be amortized  
16 into rates over a period of time. Finally, the assertion that there are no  
17 cost reductions or savings is suspect. Generally when one program  
18 replaces another, it is reasonable to anticipate some cost reductions in  
19 either maintenance or operational costs.

20

21

1 Q. What is your recommendation regarding the requested bill redesign cost?

2 A. First the one-time cost of \$42,480 ( $\$236,000 \times 18\%$ ) should be amortized  
3 over a three-year period, reducing the redesign costs in the rate year by  
4 \$28,320. Next, the unsupported increase of \$8,330 for maintenance  
5 associated with the bill inserter and publication support should be  
6 disallowed. The result is a total rate year reduction of \$36,650 to the  
7 Company's request for \$93,000 of additional costs for redesigning  
8 customer's bills.

9

10 PAYROLL

11 Q. Are there any concerns with the labor dollars included in the Company's  
12 rate request?

13 A. Yes. The Company determined its labor dollars in the rate year based on  
14 a number of adjustments to the historical test year without providing an  
15 overall summary of the labor included in the rate year. In future rate  
16 cases, the Company should be required to include a summary of the labor  
17 dollars in the filing that readily identifies the various components of labor  
18 dollars being requested in rates as well as a summary of the number of  
19 employees and/or full time equivalents (FTE's) being requested.

1           The labor in the rate year consists of the test year payroll expense  
2           adjusted by the average percentage increase to total Company  
3           compensation, a normalization increase for law department positions not  
4           filled in the historic test year and the cost for adding new employees  
5           (referred to as program changes) subsequent to the historic test year.  
6           The net increase in payroll expense (i.e. net of productivity savings of 1%  
7           per year) from the historic test year to the rate year in payroll expense is  
8           6.7%. We have concerns with the calculation of the rate year payroll,  
9           specifically the addition of employees, the amount of overtime and  
10          compensatory time, and the payment of variable pay to management  
11          employees over and above their base compensation and compensatory  
12          compensation (i.e., overtime pay for salary personnel).

13

14 Q.    Why is it necessary to have the level of detail you have identified?

15 A.    Payroll is a major expense. It accounts for approximately 39% of total  
16          operation and maintenance expense excluding fuel costs. Since payroll is  
17          such a significant percentage of O&M Expense, the development of the  
18          cost should be specific to gas operations and the gas operations  
19          employee count should be part of the filing. In the current filing, the  
20          payroll detail is related to total company and it is not specific to gas  
21          operations.

1 Q. Did you request more payroll detail than what was included in the filing?

2 A. Yes. CPB10, Question No. 84(a), requested a summary of payroll dollars  
3 for gas operations that identifies the amount of union wages for the year,  
4 the amount of management wages for the year, the total payroll dollars for  
5 the year and the amount expensed for the period 2002 - 2006, the test  
6 year and the rate year. The Company's response was "The Company  
7 does not maintain data identifying union and management wages by types  
8 of labor, i.e., straight time, premium time, overtime and compensatory time  
9 for electric, gas, or steam operations individually." That request did not  
10 ask for payroll at the level of detail the Company indicated was not  
11 available. In our experience, utilities typically include the requested  
12 information in their filing at least for the test year and the rate year. We  
13 are concerned that Con Edison was unable to provide this information,  
14 even after a specific request.

15

16 Q. Is there other payroll detail you requested that was not provided?

17 A. Yes. A summary of the number of full-time equivalent employees in Con  
18 Edison's gas operations was requested for various years. The response  
19 to CPB10, Question No. 85, was "The data for gas operations is not  
20 available." The same interrogatory also asked for staffing levels for gas  
21 operations and the response was the same. We are concerned that the

1           Company cannot tell us how many staff or fulltime equivalent employees  
2           are required to operate its gas operations, but it can ask for more  
3           employees and/or fulltime equivalents.

4

5    Q.    What are your concerns with the projected addition of employees?

6    A.    The Company has reflected an addition for law department positions not  
7           filled during the historic test year and it has reflected employee additions  
8           for program changes.    The Company has indicated that some of the  
9           positions requested have been filled but there is also an indication that  
10          other positions have not been filled and that additional vacancies have  
11          occurred.  Based on the response to CPB1, Question Number 10, some of  
12          the tax positions requested by the Company have not been filled.  
13          Similarly, based on the response to Staff14, Question Number 260, there  
14          hasn't been an increase in the number of employees in the law  
15          department despite the law department's request for program change  
16          additions or the normalization (filling of vacant) positions, the buyer  
17          positions requested were not filled in 2006 and the human resource  
18          positions requested were not filled in 2006.  In addition, according to the  
19          response to Staff14, Question Number 266, the new shared service  
20          positions were all filled from within the Company, meaning that the  
21          employee complement did not increase and the compensation change, if

1 any, is minimal. The Company's projected increase in payroll expense of  
2 \$1.024 million for additional employees, is considered to be questionable.

3

4 Q. Why are you concerned with the projection of overtime and compensatory  
5 time?

6 A. The Company's request reflects an escalation factor that incorporates total  
7 Company overtime and total Company compensatory time. According to  
8 the response to CPB10, Question No. 84(g), Con Ed cannot provide the  
9 amount of overtime charged to gas operations. In our opinion, this is a  
10 serious concern because overtime for other operations may be charged to  
11 gas operations as part of the allocation process.

12

13 Q. What are your concerns with the variable compensation?

14 A. Variable compensation is a bonus and/or incentive type pay that is over  
15 and above the base pay and compensatory pay for management.  
16 According to the response to CPB10, Question No. 84(d), "Management  
17 employees with at least a satisfactory performance rating are eligible to  
18 receive variable pay under the plan." Base pay is for "satisfactory  
19 performance." Bonus or incentive pay is added compensation for higher  
20 levels of performance that provides a benefit to ratepayers and  
21 shareholders.

1           The arbitrary addition of 6% to management pay for variable  
2           compensation is considered to be subjective and is not supported by the  
3           record. There is no testimony or supporting work papers to justify adding  
4           variable compensation into the payroll expense being charged to  
5           ratepayers. There is a concern that shareholders are the primary  
6           beneficiary of variable compensation. If the shareholders are convinced  
7           that the variable compensation is justified, they should be responsible for  
8           its cost.

9

10 Q.    What amount is included in the rate year for variable compensation?

11 A.    Because the Company's filing does not reflect specific costs for the gas  
12       operations payroll expense, the specific amount in the historic test year  
13       and the rate year is not readily available. However, based on the  
14       response to CPB10, Question No. 84(d), the estimated expense in the  
15       rate year is \$2,273 million. The response provided "The Company's  
16       expense for gas" for each of the years 2003-2006. We averaged data for  
17       2005 and 2006 and escalated it by 5.63%, to obtain our estimate of  
18       \$2.273 million.

19

20

21

1 Q. Are you recommending an adjustment to payroll expense?

2 A. Yes. It is recommended that \$512,000, or half of the projected cost of  
3 additional employees, be removed because it is not known and  
4 measurable at this time whether the projected additions will occur and  
5 result in an increase to the employee complement. We are also  
6 recommending that the \$2.273 million of variable compensation be  
7 disallowed because it is not justified by the filing. There is no evidence  
8 that the variable compensation is reasonable and/or beneficial to rate  
9 payers. The total adjustment to payroll expense in the rate year is \$2.785  
10 million.

11

12 MAINTENANCE PROGRAM CHANGES

13 Q. Have you reviewed the Company's request for maintenance costs under  
14 the caption program changes?

15 A. Yes. The Company's request for \$9.969 million consists of \$9.2 million of  
16 estimated costs for contract labor and \$.8 million of estimated costs for  
17 materials and supplies. According to the response to Staff9, Question  
18 149, five of the ten projects are new O&M programs and therefore no  
19 budget or historical actual expense data exists. The Company in its  
20 response to NYECC1, Question Number 11, indicated that all the

1 programs except the IR maintenance service contract are either safety-  
2 related, maintenance of transmissions mains or preventive  
3 maintenance/mitigation.

4

5 Q. Please provide an overview of your concerns regarding these proposed  
6 maintenance program changes.

7 A. Cost-effective maintenance of Con Edison's gas system will benefit  
8 ratepayers by helping ensure safe and reliable service and by helping hold  
9 down the costs of utility service in the long run. It is possible, however,  
10 that projects alleged to be required for safe and reliable service, may not  
11 be in the public interest. The Commission should review proposed  
12 maintenance projects, just as it evaluates other proposed expenditures, to  
13 be sure that they are cost justified. It should not assume that all projects  
14 deemed by the Company to be safety-related or for maintenance, are in  
15 fact appropriate.

16 We are concerned that the Company has not demonstrated that  
17 several of its proposed maintenance program changes are in the public  
18 interest. Moreover, Con Edison's claims that the programs are safety-  
19 related or for required maintenance, raises questions about why they were  
20 not implemented before this time.

21

1 Q. Are there concerns about the cost estimates included in the filing?

2 A. Yes. The Company's testimony that describes this significant increase in  
3 O&M expense is very brief and provides very little cost detail. The work  
4 papers for the cost estimates for the maintenance programs identify unit  
5 costs and calculations but include no specific supporting documentation.  
6 Projects 3,4,5,6 and 8 all have contingency dollars built into the cost  
7 estimates. Next, the Company has indicated that a number of the projects  
8 will extend the life of the assets involved or the cost of the project is for the  
9 replacement of assets, and yet it has elected to expense the cost because  
10 the work is consider a minor item. As stated above, historical costs to  
11 verify the reasonableness of the estimates are generally not available and  
12 absent real quotes or bids, the estimates are just guesses. In fact the  
13 Company has stated in the response to Staff9, Question Number 146, that  
14 the Hurricane Preparedness cost, is "based on best guess estimate since  
15 no device is currently available".

16 Finally there are a number of cost estimates within the \$9.969  
17 million that are one-time expenses estimated to occur only in the rate  
18 year. If rates are set to include these costs, ratepayers could continue to  
19 pay them in future years even though the cost is no longer being incurred.  
20 There are concerns with each of the ten requested projects.

21

1           Project 1

2    Q.    What concerns are there with the cost estimate for Project 1?

3    A.    Project 1 involves an increase in the number of annual inspections of local  
4           isolation valves as a result of a plan to change from a ten-year inspection  
5           cycle to a five-year cycle.    The Company, according to the responses to  
6           Staff9, Question Numbers 133 and 134, can identify the total number of  
7           local isolation valves that were inspected and the number of local isolation  
8           valve faults found, but it cannot provide a specific cost for the inspection of  
9           the isolation valves and/or for the cost to repair and/or replace the  
10          isolation valves where defaults were found.    The Company's reason for  
11          not providing the cost information is that the Company does not track the  
12          costs.

13                 Our second concern is that the estimated cost for the program  
14                 change is based on an average inspection cost for all distribution main  
15                 valve inspections and the average cost of repairs for main valve fault  
16                 repair costs in a single operating area.    It is not appropriate to base the  
17                 cost of the program on costs associated with valves that are not part of the  
18                 isolation valve program.    It is also troubling that the Company would  
19                 request to significantly accelerate its maintenance program without  
20                 investigating the specific cost of the program and/or doing a cost benefit  
21                 analysis.    When asked in CPB11, Question No. 86(c) to provide contractor

1 invoices for local isolation valves, the Company provided invoices for  
2 "main valve fault repairs not exclusive to local valves."

3 Another concern is that this project is being classified by the  
4 Company as a safety program change but it has failed to justify it as a  
5 safety issue. The Company attempts to justify the program by stating in  
6 its pre-filed testimony that a shorter interval between inspections will  
7 improve reliability and efficiency and that it will reduce the risk that a valve  
8 will not be accessible during an emergency, without providing support for  
9 that position. When questioned about the accessibility of the local  
10 isolation valves, the Company stated in response to NYECC1, Question  
11 Number 12, that the Company doesn't track information that would identify  
12 how often local isolation valves were not accessible. When asked to  
13 explain how the risk that a local isolation valve would not be accessible  
14 during an emergency would be reduced, the Company stated in response  
15 to that question that "A shorter inspection interval increases the  
16 Company's ability to address a valve that has become inaccessible or  
17 inoperable." The Company's response did not provide an answer to the  
18 question or justify its assertion in its pre-filed testimony. The Company's  
19 testimony and its responses to interrogatories have failed to justify the  
20 increase in inspections from a ten-year cycle to a five-year cycle, and the

1 Company has not provided sufficient detail and/or analysis to quantify the  
2 cost of the proposed accelerated maintenance program.

3

4 Q. Are you recommending an adjustment to the isolation valve project cost  
5 request?

6 A. Yes. We recommend that the entire \$862,000 be disallowed. The  
7 Company has failed to provide evidence that shows that reliability and  
8 efficiency will improve from an accelerated maintenance program. It also  
9 has not properly quantified the cost of the program change and has not  
10 provided a cost benefit analysis that would justify the increased cost of the  
11 program change.

12

13 Project 2

14 Q. What concerns are there with the Atmospheric Corrosion Control project?

15 A. Project 2 consists of a program to clean, coat and repair 7,070 feet of pipe  
16 and 314 supports over a three-year period at a net cost to Con Edison  
17 customers of \$5.1 million. This project is discussed in the transmission  
18 maintenance section of the Company's testimony on program changes.  
19 The concerns that have been identified are the lack of similar maintenance

1 in recent years and the lack of support for the cost projection included in  
2 the filing.

3

4 Q. What is the concern with the lack of similar maintenance in recent years?

5 A. The Company was requested in Staff9, Question Number 135, to provide  
6 historical cost information for this program change from 2003 to the  
7 present. The response provided the 2004 cost of \$504,000 for 450 feet of  
8 pipe and ten pipe supports. No information for 2003, 2005 or 2006 was  
9 provided. Based on the response, the Company only performed this type  
10 of maintenance on 450 feet of pipe in the last four years (approximately  
11 112 feet per year) and now is proposing to perform maintenance on 7,070  
12 feet over the next three years or approximately 2,350 feet per year.

13 The proposed increase in maintenance is significant. Either the  
14 Company has been neglecting this maintenance in recent years or it has  
15 not been forthcoming in their response to interrogatories. Based on the  
16 level of historic maintenance the Company has indicated that it has  
17 performed in recent years, there is no assurance that the proposed  
18 maintenance will in fact occur at the level proposed.

19

20

21

1 Q. What support did the Company provide for the cost included in the filing?

2 A. The Company has not provided any support for the cost included in the  
3 filing. It was requested in Staff9, Question Number 135, to provide work  
4 papers explaining how the cost to repair piping and supports were derived.  
5 The response simply provided the same detail that was included in  
6 Company witness Mr. Frank Ciminello's work papers, which was the  
7 length of pipe, the number of supports, the total cost, the percentage that  
8 Con Edison was responsible for and the net cost. There are no contractor  
9 estimates, quotes or bids, there was no explanation of how the total cost  
10 was derived (as was requested) and as discussed earlier, there was  
11 almost no historical information that could even be used as a proxy for  
12 determining the reasonableness of the Company's cost estimate.

13

14 Q. Was there any further attempt to obtain supporting information?

15 A. Yes. Supporting documentation was requested in CPB11, Question No.  
16 87 and the response referred to Staff 135. No supporting documents were  
17 provided for either responses. The response to CPB 87 also stated there  
18 currently are no bids yet, but there will be prior to the proposed project  
19 start date in 2008.

20

21

1 Q. Are you recommending a cost adjustment for Project 2?

2 A. Yes. Absent evidence to the contrary, we assume that maintenance will in  
3 fact increase, but not at the level proposed. We recommend that the  
4 Company be allowed recovery of the cost to perform on an annual basis  
5 twice the level of maintenance that was performed in 2004 or \$1,008,000  
6 for maintenance. This recommendation is on the condition that the  
7 Company is required to complete at least that level of maintenance and  
8 that any expenditure less than that should be set aside as a regulatory  
9 liability for future work. Allowing \$1,008,000 would reduce the Company's  
10 request for \$1,700,000 by \$692,000.

11

12 Project 3

13 Q. What is project number 3?

14 A. The third project is Transmission Main Maintenance. The Company has  
15 requested \$2.26 million for what has been identified as a new  
16 maintenance program. The project calls for the installation of welded  
17 sleeves on the Bronx portion of Con Edison's gas transmission line  
18 because there is a possibility that leaks will occur from the transmission of  
19 the drier Canadian gas that will be received in the system. The installation

1 of the welded sleeves is a three-year program estimated to cost \$6.78  
2 million.

3

4 Q. Are there concerns with the proposed program change for transmission  
5 maintenance?

6 A. Yes. The Company has not provided documentation to support the cost  
7 estimate, the estimates include a contingency, the project is to address a  
8 potential concern (i.e. Company testimony states drier gas “can cause”  
9 gaskets to shrink and “could result” in leaks) and we would consider the  
10 cost of the project, if completed, to be a cost to be capitalized and not  
11 expensed.

12

13 Q. What has the Company provided for support for the projected cost?

14 A. In the response to Staff9, Question Number 136, the Company included a  
15 summary of the work to be done including quantities and unit costs.  
16 Added to the project’s sum total is a 15% contingency. While the detail in  
17 this cost estimate is better than for most of the other maintenance  
18 projects, there still is no documentation supporting the quantities or the  
19 unit costs. The Company’s response states that the estimate is based on  
20 prices from area contracts. If this is the case, the supporting  
21 documentation should be readily available, and if it is based on actual

1 contract work, there should be no need for a 15% contingency. It is also  
2 interesting to note that when asked about historical costs, the Company  
3 was again unable to provide cost information because it did not separately  
4 track these costs even though work of this nature has been performed  
5 from 2003 to present.

6

7 Q. Was another attempt made to secure supporting information?

8 A. Yes. CPB11, Question No. 88(b), asked the Company to "Provide any  
9 supporting documentation relied on to develop the estimates." The  
10 response reiterated the response to Staff 136, that "Estimates were based  
11 on actual bid units and hourly prices as reflected in work papers submitted  
12 with the response to Staff 136." Numbers on the work papers do not  
13 constitute supporting documentation.

14

15 Q. Why is there a concern about the contingency?

16 A. If a project is properly planned and priced based on quotes and/or bids,  
17 then a reasonable price can be determined. Bids and/or quotes generally  
18 include a built-in contingency. A contingency provides a cushion for the  
19 Company that if not utilized, results in a windfall to shareholders. In this  
20 specific project, the Company is seeking approximately \$850,000 over  
21 three years, or \$283,333 a year. Ratepayers are not protected in any way

1 from the Company's failure to properly quantify its project costs and have  
2 no recourse if the project is completed without the contingency.

3

4 Q. What if there is no contingency and the project cost exceeds the estimate?

5 A. The Company is provided an opportunity to earn a return that fairly  
6 compensates it for this risk. In addition, if the costs exceed the estimate  
7 and the excess cost can be justified, the Company can file a new rate  
8 request that reflects the increase in costs. Even without a contingency  
9 there is some protection for the Company and its shareholders but with a  
10 contingency there is no protection for ratepayers. The Company was  
11 asked if there was any assurances that the cost to ratepayers was  
12 reasonable and the project will be completed when indicated. The  
13 response to CPB11, Question No. 88(e) provided no assurance and  
14 indicated costs will vary.

15

16 Q. Could you explain why you referred to the possibility of a leak as a  
17 potential concern?

18 A. The Company's testimony states that the gaskets can shrink and leaks  
19 could occur. According to Staff13, Question Number 229, the Company  
20 had 2 leaks of this nature in 2006 but none for the 2003-2005 time  
21 periods. There has been no evidence presented that would validate the

1 Company's claim that the gaskets would shrink and the leaks would occur.  
2 When asked to provide a study or studies in Staff15, Question Number  
3 279, the Company response simply made reference to other utilities'  
4 experience and the Company's participation in industry discussions but  
5 failed to provide any studies and/or supporting documentation.

6

7 Q. Why should the cost of the Transmission Main Maintenance program be  
8 capitalized?

9 A. The Company stated in response to Staff13, Question Number 231, that it  
10 expects that sealing the coupling will increase the life expectancy of the  
11 gas main. The Handbook of Accounting and Auditing published by  
12 Warren, Gorham & Lamont specifically states "Regardless of how they are  
13 described, expenditures that extend the useful life of capital assets or  
14 increase their productivity should be capitalized as an addition to the  
15 individual or composite asset account".

16

17 Q. Does the Company have support for expensing the project cost?

18 A. No. The Company was asked to provide supporting documentation for  
19 including the cost in O&M. The response to CPB 88(a) consists of a page  
20 from the Con Edison Property Accounting Manual dated July 1980. The  
21 tasks under maintenance are repairing leaking joints, broken mains, leaks,

1 etc. This Company accounting guidance is for a leak, not for a project that  
2 is preventative and of a significant nature. Further, the Company's  
3 accounting manual is not authoritative. In fact, when questioned about  
4 capitalization under GAAP in CPB 88(f), the Company simply stated that  
5 "The Company believes" this project is an O&M function.

6

7 Q. Are you recommending that the cost be allowed as a capital cost?

8 A. It is our recommendation that, subject to the Company's provision of  
9 supporting documentation for the cost estimate, the Company be allowed  
10 to capitalize the estimated cost excluding the contingency. That  
11 recommendation would reduce operating and maintenance expense  
12 \$2,260,000 and increase plant approximately \$993,300 (50% of  
13 \$1,986,000), the average of the annual amount expended.

14

15 Project 4

16 Q. What type of project is the Pressure Control Program?

17 A. The Pressure Control Program consists of three different projects: the  
18 upgrade of remote-operated valves (ROV), the inspection and  
19 improvements to gas regulator manholes and the elimination of select  
20 regulator station by-pass valves.

1 Q. What are your concerns with the Company's requested increase in cost of  
2 \$666,000?

3 A. The Company has indicated in the response to Staff9, Question Number  
4 149, that the program costs requested are incremental costs, yet it could  
5 not provide historical costs for the ROV program and the regulator  
6 manhole program because it does not track this information. As for the  
7 by-pass valve program there have not been any valves eliminated in the  
8 years 2003-2006 so there were no historical costs incurred for this  
9 supposed incremental expense. Finally the limited detail included in the  
10 work papers and responses does not provide sufficient information to  
11 verify the determination of the cost or the reasonableness of the cost  
12 estimate.

13

14 Q. Should an adjustment be made to the Company's cost request?

15 A. Yes. First the rework of the ROV is intended to correct 30 units over a  
16 five-year period or 6 units a year. The project is supposed to increase  
17 reliability and presumably reduce maintenance. In the year 2006, which is  
18 part of the test year, there were ten ROV repairs made. The ten repairs  
19 identified in the response to Staff9, Question Number 138, are significantly  
20 more than the failure rate of one per year identified in Mr. Frank  
21 Ciminello's work papers. With the significant level of repairs in 2006, the

1 test year includes expenses that are substantially greater than the normal  
2 level of expense. However, the Company's calculation of rate year  
3 expense does not adjust for either the increased level of expense in the  
4 test year or the fact that the program would lead to lower repair costs  
5 because there are fewer units subject to failure. In addition, the Company  
6 has not adequately explained or shown how the cost estimate was  
7 determined and there is no supporting documentation for the estimate.

8

9 Q. Was there an additional attempt to get more information?

10 A. Yes. An explanation and supporting documentation was requested. The  
11 response to CPB11, Question No. 89(a) provided a breakdown of the cost,  
12 but still no detailed explanation or supporting documentation was  
13 provided.

14

15 Q. What adjustment to the ROV costs are you recommending?

16 A. The first adjustment removes the entire unsupported cost increase  
17 requested for the program of \$156,000. The second adjustment removes  
18 an estimated cost of \$120,000 to account for the abnormal number of  
19 repairs in the test year. The \$120,000 estimate is based on the  
20 assumption that half of the ten repairs in 2006 were done in the test year.  
21 Since the Company stated that the normal failure rate is one a year, we

1           are adjusting for the four extra repairs in the test year. The cost estimate  
2           used for the repairs is \$30,000 per repair.

3

4    Q.    What is your basis for using \$30,000 a repair?

5    A.    The Company is proposing to rework the ROVs at a cost of \$26,000 each.  
6           We assume this rework is cost beneficial, therefore the repair costs are  
7           assumed to exceed the rework costs. Since the repair cost information  
8           requested was not provided by the Company, it is our belief that this is the  
9           best estimate of the cost to repair each unit failure.

10

11   Q.    Is there an adjustment required for the improvements to the regulator  
12           manholes?

13   A.    Yes. The Company's calculation of the estimated cost for this portion of  
14           Project 4 was provided in the response to Staff9, Question Number 139.  
15           The calculation shows the various components of the proposed ten-year  
16           cost calculation but there is no explanation or supporting detail for the unit  
17           costs. The ten-year cost also reflects a \$235,360 contingency. The  
18           original estimate essentially includes unsupported numbers on a piece of  
19           paper. It is also interesting that this incremental cost does not reflect any  
20           cost reductions and/or savings in the calculation. That means the  
21           inspection costs and any repair costs included in the test year will, based

1 on the Company's failure to reflect any offset, continue despite the  
2 improvements being proposed. We recommend a reduction of \$142,000  
3 to the Company's request for \$260,000 for the manhole improvement  
4 campaign.

5

6 Q. How did you determine your adjustment?

7 A. The Company's request as stated earlier included a contingency of  
8 \$235,360 or \$23,536 a year. First, we removed the contingency from the  
9 annual requested amount of \$260,000 leaving a balance of \$236,464.  
10 Then, assuming that this incremental program would produce some cost  
11 savings, we estimated the savings to be one-fourth of the remaining cost  
12 estimate, or \$59,116, leaving a balance of approximately \$177,348.

13

14 Q. If the cost were not fully supported why would you leave some of the costs  
15 in the rate year?

16 A. The Company provided some level of detail for this project, therefore it  
17 seems reasonable that there will be some net cost incurred. The  
18 Company eventually provided some support for some of the numbers (not  
19 all) in the response to CPB11, Question No. 89(b). Based on that  
20 response it appears some material costs may be high so the cost  
21 estimates already include a contingency.

1 Q. Is there an adjustment to be made for the request for \$250,000 for the by-  
2 pass valve elimination included in the Project 4 estimate?

3 A. Yes. The Company's request to eliminate 10 valves per year at a cost of  
4 \$25,000 per valve is not supported by the filing. The Company has no  
5 historic cost to substantiate the cost estimate and has not included any  
6 detail in the filing to explain and/or show how the cost-per-valve estimate  
7 was determined. Again the Company has simply put a number in the filing  
8 without any supportive detail. An added request for supporting  
9 documentation did not result in any new information. The Company's  
10 failure to justify the requested amount is reason enough to disallow the  
11 entire \$250,000.

12

13 Q. What if supporting documentation had been provided?

14 A. If the Company had provided supporting detail and/or documentation for  
15 the cost estimate, we would still recommend that the cost be removed  
16 from O&M expense, but we would then recommend that it be allowed in  
17 capital additions. Testimony by the Company suggests that the  
18 elimination of the valves would increase the life expectancy of the system.  
19 As stated earlier, if the expenditure of funds extends the life of an  
20 individual or composite asset the cost should be capitalized.

21

1            Project 5

2    Q.    Could you explain the Company's request for the Tunnel Program?

3    A.    The Tunnel Program consists of three different programs. The first is the  
4           inspection, coating removal, repair and recoating of the mains in tunnels  
5           over a period of years at an estimated annual cost of \$135,000. The  
6           second program is the replacement of twenty Catalytic gas sensors with  
7           Optoacoustic sensors in the rate year only, at a cost of \$205,000. The  
8           third program replaces roller assemblies and repairs deteriorated sections  
9           of concrete piers in the rate year at an estimated cost of \$405,000. This  
10          pier and assembly work is a rate year only program. The response to  
11          Staff9, Question Number 141, provides a very brief explanation on how  
12          the costs were developed and includes an attachment showing the  
13          calculation of the estimates. The Company asserts that the costs of this  
14          project are incremental costs.

15

16   Q.    Is there justification and/or supporting documentation for the first program  
17          cost estimate?

18   A.    There is justification for work of this nature on an ongoing basis.  
19          However, the Company has stated in its response to Staff9, Question  
20          Number 141, that "It has been several years since any major removal and

1 re-taping of any New York Facilities gas mains in any of the tunnels has  
2 been performed and no actual cost reports are available”.

3 Essentially the Company has not been performing the maintenance  
4 that it is now proposing to do on an annual basis. The estimate that the  
5 Company develops is based on discussions and not on written contractor  
6 estimates and/or quotes. And again, the Company has plugged an extra  
7 amount into the cost for a contingency, in this case approximately \$12,000  
8 on an annual basis. There is justification for the program but there is no  
9 supporting documentation for the cost estimate. Support was provided for  
10 some material costs, but there was not sufficient detail to verify the  
11 estimate.

12

13 Q. Are you recommending an adjustment be made to the cost estimate?

14 A. Yes. The estimated annual cost should be reduced \$12,000 for the  
15 contingency. We reluctantly recommend that the remaining costs be  
16 allowed on the condition that the Company provides supporting  
17 documentation for the cost estimate in the form of written bids and/or  
18 quotes and it is required to track the cost and report the progress of the  
19 project to the Commission.

20

21

1 Q. Is the cost estimate for the sensors replacement program sufficiently  
2 explained and supported by the Company?

3 A. No. The Company has shown how the cost was calculated, but it has not  
4 included sufficient cost documentation for all the amounts, time and/or  
5 quantities in the calculation. The response to CPB11, Question No. 90(c),  
6 provided support for the unit cost of the sensors. However, the total cost  
7 is inflated first by a \$17,200 contingency and then by \$15,800 of rounding.  
8 That is a 19% cushion over the calculated estimate.

9 The program provides for the replacement of existing Catalytic  
10 sensors with new Optoacoustic sensors. The work papers of Mr. Frank  
11 Ciminello indicate that the new Optoacoustic sensors do not degrade over  
12 their life span like the Catalytic sensors and they will provide accurate and  
13 reliable detection. That may provide the justification that is needed to  
14 allow the cost in the rate year but it is indicative of capital costs. Since all  
15 the sensors are supposed to be replaced in the tunnels then the cost of  
16 the sensors being replaced should be removed from the filing but they  
17 were not. Finally the program is a replacement that is supposed to  
18 provide a benefit in the future because of the reliability. The matching  
19 principle for accounting would suggest that the cost of the program be  
20 capitalized and amortized over the period benefited.

21

1 Q. What adjustment are you recommending to O&M expense for this  
2 program cost?

3 A. O&M expense should be reduced by the \$205,000 requested and plant  
4 should be increased by \$86,000  $((\$205,000 - \text{cushion of } \$33,000) \times 50\%)$   
5 which is the average addition for the rate year excluding the extra cushion  
6 the Company included in the estimate.

7

8 Q. Should the cost of the concrete repairs and roller assembly replacement  
9 be allowed?

10 A. Not entirely. The same issues exist with this program. The estimate is not  
11 supported by historical costs, written quotes and/or bids and the estimate  
12 includes a \$36,871 contingency. According to the response to Staff9,  
13 Question Number 143, there were no replacements or costs incurred for  
14 this program for the years 2003-2006 and there is no record of any past  
15 replacement. This program is a new program and is not an incremental  
16 cost to an existing program as the Company has indicated. Based on the  
17 limited detail provided by Con Edison, the repairs appear to be necessary;  
18 however these are capital costs, not O&M expenses. According to Mr.  
19 Frank Ciminello's workpapers, the items being replaced have reached the  
20 end of their useful life. The costs incurred to replace the roller assemblies

1 and the concrete piers will provide a benefit over some future period and  
2 the cost should be expensed over that future period of time.

3

4 Q. What is your recommended adjustment for the third program in Project 5?

5 A. The entire \$405,000 requested should be removed from O&M expense  
6 and \$184,500 should be added to plant. The \$184,500 is 50% of the cost  
7 estimate of \$405,000 less the approximate \$36,000 contingency.

8

9 Project 6

10 Q. Would you identify the types of programs and the cost estimates included  
11 in Project 6?

12 A. Project 6, the LNG Programs, includes four programs at a combined cost  
13 of \$714,000. The programs address replacement of the pipe supports,  
14 recoating of the concrete berm walkway at the LNG plant, asbestos  
15 removal and lead abatement. Some of the estimates indicate that the  
16 costs are based on contracts or quotes. The estimate also includes a  
17 contingency of \$64,500. Supporting documentation was provided for only  
18 two of these programs, the recoating of the concrete berm and the lead  
19 abatement work, although it was specifically requested for all project  
20 costs.

1 Q. Are you recommending an adjustment to the cost estimate for Project 6?

2 A. Yes. The contingency of \$64,500 should be removed from the Company's  
3 request. The remaining cost of \$649,500 should be allowed on the  
4 condition that the Company produces sufficient documentation to support  
5 the unit costs reflected in the respective program estimates. This project  
6 is concurrent with the LNG plant upgrade and based on the limited  
7 explanations provided, appears to be necessary. There may be some  
8 question about whether the costs should be capitalized along with the  
9 plant upgrade. However, since the most of the costs are expected to  
10 occur for more than one year, the expense may be reasonable if the cost  
11 and accounting treatment is properly supported. The recommendation is  
12 qualified because accounting guidelines suggest the cost of asbestos  
13 treatment be capitalized as a betterment to the property being improved.

14

15 Project 7

16 Q. What is the Southern Manhattan CI Joint Sealing Project?

17 A. The Company is requesting \$760,000 for preventive joint sealing on an  
18 accelerated basis in lower Manhattan. The work is to be done in  
19 conjunction with, or in anticipation of, City work. The estimate assumes  
20 that over the next three years, the Company will seal approximately 400

1 joints per year in lower Manhattan. Over the last four years (2003-2006),  
2 the Company has sealed on average 2,452 joints a year at an average  
3 cost of \$1,782 per joint. That would suggest that the cost estimate by the  
4 Company may be reasonable for the proposed project.

5

6 Q. Does that mean that you do not have any concerns with this project  
7 estimate?

8 A. No. There are concerns. First, the project involves the sealing of joints  
9 that are not leaking. Second, the project is designed to be preventative  
10 maintenance. The fact that the Company would be doing preventative  
11 maintenance suggests that there should be a reduction in the number of  
12 leaks that will require sealing. As with the other projects or new costs that  
13 the Company has included in this filing, there has not been any cost  
14 savings reflected to account for a reduction in repairs or costs incurred in  
15 the historic test year. Third, a follow-up request for supporting  
16 documentation for the cost estimates did not produce any new  
17 information. However despite our concerns, we do not recommend an  
18 adjustment at this time.

19

1           Project 8

2    Q.    What is the Hurricane Preparedness program?

3    A.    The Company is requesting \$935,000 in the rate year for a proposed  
4           hurricane impact study and the cost for the first year of a ten-year program  
5           for installing water-tight check valves on elevated pressure gas service  
6           vent lines. After the rate year, the only cost will be the cost of the check  
7           valves. Even though the Company plans to complete the program over  
8           ten years, it is requesting funding for the impact study in the rate year.

9

10   Q.    What concerns are there with the Company's request?

11   A.    Mr. Frank Ciminello's work papers indicate that the Company will secure a  
12           consultant to perform the impact study at an estimated cost of \$700,000  
13           and the Company's testimony states that the Company will "plan" to  
14           commission a study. The Company has estimated the cost of the check  
15           valve project to be \$2,130,000 over the ten years plus a contingency of  
16           \$213,000. According to the response to Staff9, Question Number 146, the  
17           cost estimate per check valve is "based on a best guess estimate"  
18           because the Company has "no prior experience with the installation of  
19           check-type valves installed on vent lines to house regulators." The valve  
20           proposed is a proto-type check valve. The valve is supposed to be  
21           designed to provide protection from a storm surge from a category 3

1 hurricane even though the areas to be protected “have not experienced a  
2 category 3 hurricane (wind and storm) occurrence in the recent past.” The  
3 response to CPB11, Question No. 93, indicated that the vendor of the  
4 proto-type provided an estimate, but no documentation was included with  
5 the response to support the cost.

6

7 Q. What recommendation are you making for the cost estimate in Project 8?

8 A. I am recommending that the \$700,000 estimated cost of the study be  
9 disallowed at this time. There is no evidence that the study will in fact take  
10 place. If the Company does plan to secure a consultant to perform an  
11 impact study, it should obtain authority from the Commission to defer the  
12 costs of the study. This treatment allows for the review of the study and if  
13 found to be necessary, the cost could be amortized over a period of time.  
14 Theoretically the study will provide a benefit over future periods and the  
15 cost of that benefit should then be amortized over the period of the benefit.

16 There is also concern about asking ratepayers to pay for a proto-  
17 type valve when the Company has no prior experience with check-type  
18 valves on vent lines to house regulators. The project seems to have merit.  
19 However, to undertake a major project without first testing the equipment  
20 and verifying the cost, is a gamble and could be considered to be  
21 imprudent. Finally, even if the cost could be determined and the project

1           was found to be prudent, the costs should be capitalized instead of  
2           expensed. The \$235,000 a year for the valves should be disallowed  
3           because the cost and the project are not known and measurable.

4

5           Project 9

6    Q.    Do you agree with the Company's request to expense certain costs  
7           associated with the replacement of cast iron mains?

8    A.    No. The replacement of the mains is akin to the installation of a self-  
9           constructed asset. The Handbook of Accounting and Auditing published  
10           by Warren, Gorham & Lamont includes a discussion on self-construction,  
11           which states "All the costs of putting the asset into the condition and  
12           location for use are capitalized." Typically when an asset is put into  
13           service, all costs are capitalized. We are not aware of any authoritative  
14           exception to this policy. In response to a request that the Company  
15           provide its guidelines and authoritative accounting guidelines regarding  
16           this issue, it provided only the Company's accounting policy. An  
17           authoritative guideline that would support the Company's accounting  
18           guidelines was not provided. Without authoritative support the Company's  
19           position is not supported.

1           The Company's request for O&M treatment of the costs associated  
2           with the capital project should be denied. O&M expense should be  
3           reduced by \$733,000. If the PSC determines that this capital program is  
4           justified, the costs should be capitalized.

5

6           Project 10

7    Q.    Are you recommending an adjustment to the projected costs for IR Annual  
8           Service Maintenance Contracts?

9    A.    Yes. The Company's response to CPB11, Question No. 95 states "These  
10           cost estimates for the annual service contracts are based on the existing  
11           contracts with vendors that are being continued." There is some concern  
12           that the Company has reflected only additional costs or duplicated the cost  
13           for service maintenance for software. It is uncommon for there only to be  
14           added costs since other programs typically become obsolete and no  
15           longer used. As a result, the need for maintenance contracts on those  
16           programs should disappear along with their cost. Because this appears to  
17           be a duplication of costs and even if not a duplication of costs because  
18           support was not provided as requested, the entire \$594,000 should be  
19           disallowed.

20

1           Summary

2    Q.    Have you prepared a summary of your recommended adjustments to the  
3           maintenance program changes?

4    A.    Yes. Attached, as Exhibit\_\_(L&A-2), is a listing of each of the respective  
5           projects, including the sub parts to the projects. On this schedule, we  
6           have listed the Company's requested amount and the respective  
7           recommended adjustments that reduce projected O&M expense by  
8           \$7.372 million.

9

10   RESEARCH & DEVELOPMENT

11   Q.    Have you reviewed the Company's projection of Research & Development  
12           expense?

13   A.    Yes. The Company has requested an increase of \$2.15 million from \$3.7  
14           million in the test year to \$5.85 million in the rate year. The 58% increase  
15           includes \$1.869 million for various projects and \$281,000 in escalation. In  
16           reviewing Company Exhibit\_\_EE-1, it was noted that the number of  
17           projects in the rate year is double the number of projects in the historic  
18           test year. The rate year increase for internal R&D was \$1.5 million or 66%  
19           above the \$2.3 million expended in the test year. This expansion in the

1           number of projects is extraordinary. And the requested spending appears  
2           to be a “wish list” when compared to historic spending.

3

4   Q.    What is the historic spending for Research & Development?

5   A.    The five-year average for the twelve-month periods ended June 30, 2002-  
6           2006 is \$2.7 million. Extracting the 2003 cost, because it is abnormally  
7           low due to credits from capitalizing prior year costs, the four-year average  
8           is \$3.13 million. R&D spending fluctuated from one year to the next and  
9           does not reflect a steady increase. The highest level of the combined  
10          Internal R&D and Millennium R&D spending occurred in 2006 with \$3.7  
11          million being expensed. Internal R&D expense was higher in 2002 than in  
12          2003, 2004 or 2005.

13

14   Q.    Are there concerns about the Company’s list of proposed R&D projects?

15   A.    Yes. Staff requested information on thirteen of the internal projects, all in  
16          excess of \$50,000. In response to Staff3, Question Number 54, the  
17          Company stated that “Cost benefit analysis are performed if the projects  
18          are initially expected to cost in excess of \$50,000, shortly before  
19          expenditures are about to commence” and that of the thirteen listed only  
20          two met this qualification. In reviewing the two cost benefit analysis for the  
21          rate year it was noted that the analysis were done in 2003 and 2005. It

1 appears that the other projects are not “about to commence” and that  
2 activity on the project does not necessarily start right after the cost benefit  
3 analysis is complete, as evidenced by the date of the analysis supplied.  
4 There is not sufficient evidence to justify a 58% increase in R&D spending.

5 Adding to this concern, the Company applied an escalation factor to  
6 the proposed rate year spending. As indicated earlier, spending fluctuated  
7 from year to year so adding the escalation to the rate year request is  
8 considered excessive.

9

10 Q. What amount of expense are you recommending for R&D?

11 A. We recommend that the test year expense level be escalated with no  
12 additional increases. The rate year increase of \$1.869 million and the  
13 escalation added to the Company’s rate year amount should be  
14 disallowed. As previously indicated, earlier spending fluctuated from year  
15 to year. If the rate year was estimated based on an average, the R&D  
16 adjustment would be a reduction to the test year level. Allowing an  
17 escalated test year amount may be reasonable even though it ignores the  
18 historical year to year fluctuations.

19

1    GAS SURVEYS

2    Q.    Is there an adjustment required to the Gas Survey expense on Line 14 of  
3           Company Exhibit\_\_AP-6, Schedule 8?

4    A.    Yes.    In response to Staff13, Question Number 252, the Company  
5           acknowledged that the estimate for Gas Surveys should be reduced from  
6           \$150,000 to \$75,000 based on the selection of a consultant to perform the  
7           surveys.

8

9    PENSION & OPEB EXPENSE

10   Q.    What amount has the Company included in the filing for pension and  
11          OPEB expense for the rate year ending September 30, 2008?

12   A.    The Company's filing includes projected rate year pension and OPEB  
13          expense of \$13,953,000. It also includes \$11,463,000 for a proposed  
14          three-year amortization of the projected pension and OPEB deferral  
15          balance as of the start of the rate year. Combined, these two items result  
16          in \$25.4 million of expense in the projected rate year. This is identified in  
17          the Company's application as one of the major increases in costs  
18          necessitating the requested rate increase.

19

1 Q. What was the amount of pension and OPEB expense recorded by the  
2 Company for its gas operations for the historic test year ended June  
3 2006?

4 A. The actuarially determined pension and OPEB expense applicable to the  
5 gas operations for the historic test year ended June 30, 2006 was  
6 \$6,352,000. However, under the Joint Proposal adopted by the  
7 Commission in Case 03-G-1671, the pension and OPEB expense  
8 included in rates during that period was actually an income amount of  
9 \$6,020,000. In other words, rates during the historic test year factored in  
10 a negative pension expense, or pension income, of \$6,020,000. As a  
11 result, the Company recorded a deferral on its books of \$12,372,000,  
12 which is the difference between the actuarially determined pension and  
13 OPEB expense of \$6,352,000 and the pension and OPEB income level of  
14 \$6,020,000 factored into rates.

15

16 Q. Should any adjustments be made to the pension and OPEB expense  
17 included in the Company's filing?

18 A. Yes, we are recommending two separate adjustments to the pension and  
19 OPEB expense contained in the filing. The first adjustment is a  
20 recommended \$2,066,100 reduction to the \$13,953,000 pension and  
21 OPEB expense included in the adjusted rate year. The second

1 adjustment is a recommended \$8,379,900 reduction to the proposed  
2 \$11,463,000 of deferred pension and OPEB amortization expense.

3

4 Q. Why are you recommending the projected \$13,953,000 of pension and  
5 OPEB expense be reduced?

6 A. Since the time the Company prepared its filing, it has received updated  
7 pension and OPEB expense estimates from the firm that prepares its  
8 actuarial reports. The letters from the actuarial firm performing the  
9 calculations, Buck Consultants, were dated January 15, 2007 and January  
10 19, 2007 for the pension and OPEB plans, respectively. The updates,  
11 which were provided in response to Staff14, Question 273, incorporate  
12 more recent information and reflect the impacts of the actual December  
13 31, 2006 pension and OPEB plan assets. There were also revisions  
14 made to some of the actuarial assumptions based on more recent  
15 information and projections. For example, the projected discount rate  
16 used in the actuarial calculations for both the pension plan and the OPEB  
17 plan has increased from 5.70% to 6.0% and the health care cost trend  
18 rates have been increased from 8.0% in 2007 to 9.0% in 2007. We  
19 recommend that the projected pension expense for the rate year be  
20 revised to reflect the updated actuarial calculations. According to  
21 Exhibit\_\_(AP-6), Schedule 10, the Company intends to update the

1 pension & OPEB expense contained within its filing. We anticipate that  
2 the planned update will incorporate the impact of the more recent actuarial  
3 calculations.

4

5 Q. Did the updated information provided in response to Staff14, Question  
6 273, specifically identify the impact of the updates on Con Edison's gas  
7 operations and on the expense included in the rate year in the filing?

8 A. No, it did not. The information provided by the Company consisted of the  
9 updated calculations from the actuarial firm and was provided on a total  
10 Con Edison basis.

11

12 Q. Since the information was not provided on a gas operations basis, how did  
13 you estimate the impact on the pension and OPEB expense contained in  
14 the filing?

15 A. Our calculation of the estimated impact on the amount of pension and  
16 OPEB expense for the gas operations is presented on Exhibit\_\_(L&A-1),  
17 Schedule 2. Based on a comparison of the updated information provided  
18 in the response to the total Con Edison amount that was contained in the  
19 workpapers presented by the Company in this case, the total Con Edison  
20 pension and OPEB cost for the rate year ended September 30, 2008 has  
21 declined by 14.81%. We applied the 14.81% reduction factor to the total

1 pension & OPEB expense included in the rate year in the filing of  
2 \$13,953,000, resulting in a reduction of \$2,066,100 ( $\$13,953,000 \times$   
3 14.81%). This results in a revised projected rate year pension and OPEB  
4 expense of \$11,886,900. Since the pension and OPEB costs are  
5 allocated from the total Con Edison level to the gas operations, the overall  
6 percentage reduction to the total Con Edison costs should also be  
7 applicable to the gas operations.

8

9 Q. Please provide a summary of the Company's request with regards to the  
10 pension and OPEB plan deferral.

11 A. The Company is currently on the Commission's Pension Policy Statement.  
12 As a result, it has been deferring on its books the difference between the  
13 amount of pension and OPEB expense included in rates as a result of the  
14 Commission's adoption of the Joint Proposal in Case 03-G-1671 and the  
15 amount of pension and OPEB expense it actually incurs. The projected  
16 deferral balance included in the Company's filing consisted of the actual  
17 amount deferred as of June 30, 2006 of \$15,477,296, plus an additional  
18 \$18,911,663 it projected to defer during the period July 1, 2006 through  
19 September 30, 2007. The combination of the actual and the projected  
20 amounts resulted in a projected deferral balance at the start of the rate  
21 year of \$34,388,958. The Company is proposing to recover this projected

1 deferred balance from ratepayers over a three-year period, including  
2 \$11,462,986 in rate year amortization expense for recovery of the  
3 estimated deferral.

4

5 Q. Are you recommending any revisions to the projected September 30, 2007  
6 deferral balance?

7 A. Yes. We are recommending a \$3,558,100 reduction to the projected  
8 deferral, resulting in a revised deferral balance to be recovered from  
9 ratepayers of \$30,830,900. This reduction incorporates two revisions to  
10 the Company's proposed amounts. As shown on Exhibit No.\_\_(L&A-1),  
11 Schedule 3, the first step was to reflect the actual amount deferred  
12 through December 31, 2006. As previously indicated, the Company's  
13 filing incorporated the actual balance through June 30, 2006 and included  
14 estimated deferrals for the remainder of 2006 and for 2007 through the  
15 start of the rate year. Our calculation reflects an additional six months of  
16 actual information.

17 On the schedule, we also reduce the amount to be deferred for the  
18 period January 1, 2007 through September 30, 2007. The Company had  
19 projected that \$11,998,200 would be deferred on its books during the  
20 nine-month period. The amount was calculated based upon the pension  
21 and OPEB expense calculations incorporated in the Company's filing. As

1           previously indicated, the Company's actuarial firm has reduced the  
2           projected pension and OPEB costs based on updated information and  
3           more recent actuarial assumptions. The projected total Con Edison 2007  
4           pension and OPEB costs have declined from \$182,600,000 to  
5           \$164,900,000, a reduction of 9.7%. We applied the 9.7% reduction factor  
6           to the amount projected to be deferred by Con Edison for the gas  
7           operations for the period January 1, 2007 through September 30, 2007.

8

9    Q.    Do you agree with the Company's proposal to recover the pension and  
10       OPEB deferral from ratepayers over a period of three years?

11   A.    No, we are recommending a longer amortization period. Over 50% of the  
12       pension and OPEB costs included in the filing are for the amortization of  
13       amounts that have been deferred. As previously indicated, the Company  
14       has identified the pension and OPEB costs as one of the major factors in  
15       this case causing the need for its requested rate increase. Considering  
16       the large proposed rate increase, coupled with other cost increases  
17       ratepayers are bearing associated with high gas commodity costs, we  
18       recommend that the Company recover the deferred balance over a longer  
19       period. This would help to mitigate the impact of the rate increase while  
20       still making the Company whole in this area. Specifically, we are

1 recommending a ten year amortization of the deferred balance instead of  
2 the three years proposed by the Company.

3 As shown on Exhibit No.\_\_(L&A-1), Schedule 3, the reduction to  
4 the projected deferral balance coupled with a lengthening of the  
5 amortization period to ten years would result in an \$8,379,900 reduction to  
6 the amortization expense.

7

8 REVISED CAPITAL EXPENDITURE BUDGET – 2007

9 Q. Since the time the Company filed its case, have any significant revisions  
10 been made to the capital expenditure budgets as compared to those  
11 factored into the plant additions in the Company's filing?

12 A. Yes. In determining the rate year level of plant-in-service, the Company  
13 began with the actual June 30, 2006 plant balances. It then factored in  
14 budgeted capital additions for subsequent periods along with estimated  
15 retirements in deriving the plant-in-service balances factored into the rate  
16 year ending September 30, 2008. Under the Company's capital  
17 expenditures budgeting process, the preliminary budget is presented to  
18 the Company's Finance Committee and Board of Trustees in October of  
19 each year and a final budget is presented to the Board of Trustees in  
20 November. Thus, at the time of the Company's filing, the 2007 capital

1 expenditures budget would not have been finalized or approved by the  
2 Board of Trustees.

3 In December of 2006, the Company provided preliminary updates  
4 to the filing to reflect the impact of the approved 2007 capital expenditure  
5 budget. Based on the information provided, the 2007 capital budget for  
6 the gas and LNG operations has been reduced from \$212,095,000  
7 factored into the filing to \$178,790,000. This is a \$33,305,000 or 15.7%  
8 reduction to the 2007 capital expenditures that were anticipated at the  
9 time the filing was prepared by Con Edison.

10

11 Q. Has Con Edison provided the impact on its requested rate year revenue  
12 requirement resulting from the revision to the 2007 capital expenditure  
13 budget?

14 A. Yes. Revised exhibits provided by Con Edison in December 2006 indicate  
15 that revenue requirement should be reduced by \$4,299,000 to reflect the  
16 various impacts of the revision. The revision impacts not only plant-in-  
17 service, but also other items such as accumulated depreciation,  
18 depreciation expense and income taxes. On Exhibit\_\_(L&A-1), Schedule  
19 1, we provide the revenue requirement impact that was identified by the  
20 Company, a reduction of \$4,299,000.

21

1 Q. Does it appear that the Company correctly flowed through all of the  
2 impacts on its filing resulting from the reduction to the 2007 capital  
3 expenditure budget?

4 A. No, it does not. While the update reflects a \$32,329,000 reduction to  
5 average plant-in-service, the reduction to depreciation expense is only  
6 \$119,000. The reduction to depreciation expense resulting from the \$32.3  
7 million reduction to the average plant in service balance appears to be  
8 significantly understated.

9  
10 Q. Have you estimated the impact on depreciation expense that would result  
11 from the \$32.3 million reduction in average rate year plant in service?

12 A. Yes. The Company's original filing included rate year depreciation  
13 expense of \$95,963,000 and \$3,381,490,000 of average rate year plant-  
14 in-service. The resulting average depreciation rate is 2.84% ( $95,963,000 /$   
15  $3,381,490,000$ ). Application of the effective average depreciation rate to  
16 the revised average plant-in-service balance in the Company's preliminary  
17 update results in depreciation expense of \$95,046,000 ( $3,349,161,000 \times$   
18  $2.84\%$ ). This is reduction to the depreciation expense contained in the  
19 original filing of \$917,000. The reduction included by the Company of  
20 \$119,000 should be increased by \$798,000. We have reflected this  
21 additional reduction to depreciation expense on Schedule 1.

1 Q. Do there appear to be any additional errors in the preliminary update  
2 provided by the Company?

3 A. Yes. In determining the reduction to the 2007 budgeted capital  
4 expenditures, the Company compared its Board of Trustees' approved  
5 2007 capital expenditure budget of \$178,790,000 to \$212,095,000,  
6 reflecting a reduction to the 2007 capital expenditure budget of  
7 \$33,305,000. However, the amount of 2007 capital expenditures shown in  
8 the workpapers presented in support of the Company's filing includes an  
9 additional \$117,000 identified as "Gas Customer Load Characteristics  
10 Rate Engineering" and \$8,886,000 for the Automated Meter Reading  
11 ("AMR") investments. In other words, the 2007 gas and LNG capital  
12 expenditures contained in the workpapers and flowing through the filing  
13 are \$220,098,000 ( $\$212,095,000 + \$117,000 + \$8,886,000$ ).

14

15 Q. Are you recommending an additional adjustment to remove the two items  
16 that have not been taken into consideration in the Company's preliminary  
17 update?

18 A. No, not at this time. At this point, we are assuming the project is going  
19 forward, although it may be questionable as it was not specifically  
20 identified in the update to the 2007 capital expenditure budget. According  
21 to the response to CPB5, Question 34, the projected cost savings for the

1 gas operations during the rate year resulting from the AMR system are  
2 estimated to be \$1.8 million. The Company did not reflect these cost  
3 savings in its filing and indicated in the response that these savings will be  
4 reflected in its update submittal. At this time, we are reflecting the \$1.8  
5 million estimated cost savings on Schedule 1. In the event that these cost  
6 savings are not ultimately reflected, the additional capital expenditures  
7 contained in the filing for the 2007 AMR capital additions should also be  
8 removed.

9

10 2008 CAPITAL ADDITIONS

11 Q. Considering the significant reduction to the 2007 capital expenditure  
12 budget resulting from the amount actually approved by the Board of  
13 Trustees, did the Company also revise the estimated 2008 capital  
14 expenditures contained in the rate year?

15 A. No, it did not. The original filing factored in projected 2008 capital  
16 additions of \$256,490,000 for gas distribution and \$10,369,000 for LNG  
17 plant, resulting in a combined amount of \$266,859,000. This is  
18 significantly more than the original 2007 capital expenditures contained in  
19 the filing of \$220,098,000 and also significantly higher than the 2007  
20 capital expenditure budget approved by the Board of Trustees of

1           \$212,095,000. Despite the 15.7% reduction in the 2007 capital  
2           expenditure budget, the Company has not updated or likewise reduced its  
3           aggressive 2008 capital expenditures budget reflected in the filing.

4

5   Q.    Are you recommending an adjustment be made to the rate year to reduce  
6           the 2008 capital expenditures from the level contained in the filing?

7   A.    Yes, we are. In view of the 15.7% reduction in the 2007 capital  
8           expenditure budget, it would be illogical to assume that the 2008 capital  
9           expenditure budget would be unaffected. Based on available information,  
10          we are recommending a reduction of 15.7% to the \$266,859,000 of 2008  
11          projected capital expenditures factored into the filing. In establishing rates  
12          in this proceeding, the Commission should consider decisions made by  
13          Con Edison's Board of Trustees regarding the 2008 capital budget, if any.

14                 On Exhibit\_\_(L&A-1), Schedule 4, we estimate the impact of the  
15                 reduction to the 2008 capital expenditures on the average rate year ended  
16                 September 30, 2008 plant-in-service balance, resulting in a reduction to  
17                 plant in service of \$12,088,000. We applied the average depreciation rate  
18                 of 2.84% to the reduction, resulting in a \$343,000 reduction to rate year  
19                 depreciation expense. The impact on revenue requirement from these  
20                 two adjustments is \$2,133,000, which is reflected on summary Schedule  
21                 1.

1 Q. Does this complete your prefiled testimony?

2 A. Yes, it does.

## **ATTACHMENTS**

## ATTACHMENT I

Mr. Schultz received a Bachelor of Science in Accounting from Ferris State College in 1975. He maintains extensive continuing professional education in accounting, auditing, and taxation. Mr. Schultz is a member of the Michigan Association of Certified Public Accountants

Mr. Schultz was employed with the firm of Larkin, Chapski & Co., C.P.A.s, as a Junior Accountant, in 1975. He was promoted to Senior Accountant in 1976. As such, he assisted in the supervision and performance of audits and accounting duties of various types of businesses. He has assisted in the implementation and revision of accounting systems for various businesses, including manufacturing, service and sales companies, credit unions and railroads.

In 1978, Mr. Schultz became the audit manager for Larkin, Chapski & Co. His duties included supervision of all audit work done by the firm. Mr. Schultz also represents clients before various state and IRS auditors. He has advised clients on the sale of their businesses and has analyzed the profitability of product lines and made recommendations based upon his analysis. Mr. Schultz has supervised the audit procedures performed in connection with a wide variety of inventories, including railroads, a publications distributor and warehouser for Ford and GM, and various retail establishments.

Mr. Schultz has performed work in the field of utility regulation on behalf of public service commission staffs, state attorney generals and consumer groups concerning regulatory matters before regulatory agencies in Alaska, Arizona, California, Connecticut, Delaware, Florida, Georgia, Kentucky, Kansas, Michigan, Minnesota, Mississippi, Missouri, New Jersey, New York, Nevada, North Dakota, Ohio, Pennsylvania, Rhode Island, Texas, Utah, Vermont and Virginia. He has presented expert testimony in regulatory hearings on behalf of utility commission staffs and intervenors on numerous occasions.

## ATTACHMENT II

### QUALIFICATIONS OF DONNA DERONNE, C.P.A.

Q. WHAT IS YOUR OCCUPATION?

A. I am a certified public accountant and regulatory consultant in the firm of Larkin & Associates, PLLC, Certified Public Accountants, with offices at 15728 Farmington Road, Livonia, Michigan.

Q. PLEASE DESCRIBE YOUR EDUCATION AND EXPERIENCE.

A. I graduated with honors from Oakland University in Rochester, Michigan in 1991. I have been employed by the firm of Larkin & Associates, PLLC, since 1991. As a certified public accountant and regulatory consultant with Larkin & Associates, PLLC, my duties have included the analysis of utility rate cases and regulatory issues, researching accounting and regulatory developments, preparation of computer models and spreadsheets, the preparation of testimony and schedules and testifying in regulatory proceedings. I have also developed and conducted five training programs on behalf of the Department of Defense - Navy Rate Intervention Office on measuring the financial capabilities of firms bidding on Navy assets and one training program on calculating the revenue requirement for municipal owned water and wastewater utilities. A partial listing of cases which I have participated in are included below:

**Performed Analytical Work in the Following Cases:**
